

Sustainability with Topakustik AG

What we do, we do with respect for the environment.

Natural barrier lake of Lungern

“
Everything, what
is against nature,
will not last for lang.
“
- Charles Darwin

Numerous certification systems are in use around the globe to assess the sustainability of buildings. Topakustik Materials can be configured and ordered to meet high environmental standards.

The use of Topakustik products for a building rated as sustainable must be as effortless as possible. The EPD (Environmental Product Declaration) summarizes all environmentally relevant information of the product components.

A HPD (Health Product Declaration) is a product disclosure report providing transparency in the building product sector about product content and potential health hazards.

Topakustik AG attaches great importance to low VOC emissions (VOC for volatile organic compounds). Corresponding system certificates are available.

UL Environmental report

(A+ products are marked)

Topakustik materials are available with NAF core material. NAF stands for No Added Formaldehyde and means that no formaldehyde-based binders are used for the production of certain MDF products.

The surface specialists of Topakustik AG use water-based paints with a low VOC content as standard.

The mark of
responsible forestry
FSC® C003234
